Software Engineer · Design Engineer · Systems Thinker

Engineer who leads with questions before reaching for code. Background spanning visual art, art history scholarship (The Courtauld Institute), museum education, and software engineering produces a rare combination: the technical depth to own frontend architecture and evaluate backend API design, and the conceptual rigor to frame systems around genuine human problems. Promoted to Software Engineer in month 10 of my first engineering role after VP of Engineering identified the pace at which I absorbed complexity. Trusted by two VPs to own both the architecture and the design of production systems.

TECHNICAL SKILLS

- ▶ React.js · Vue 3 · JavaScript (ES6+)
- ▶ GraphQL · REST APIs · Postman · API design
- ▶ PostgreSQL · MongoDB · SQL Server
- ▶ Figma · Adobe Creative Cloud
- ▶ OpenSeadragon · IIIF Image API
- ▶ Component architecture · Design systems · Atomic design
- ▶ Node.js · Express · C# / ASP.NET Core (familiar)
- ▶ Jest · CI/CD · Git / GitHub / GitLab
- ▶ DataDog · Performance optimization · Accessibility
- ▶ Chart.js · Sentiment analysis / NLP pipelines

Certification: GraphQL Associate Developer

EXPERIENCE

Software Engineer | [Data Skrive](#) | 2022 – 2024

Promoted from Associate Software Engineer in month 10 after VP of Engineering identified ability to absorb complexity at pace and my ability to complete full sprints alongside seasoned developers without additional support. Agile team of 13.

- **Owned frontend architecture** for two major product systems — both scoped by the PM and designed end-to-end by me, with final architecture approved by the VP of Engineering.
- **Led full redesign of the frontend platform** tasked directly by VP of Product when the dedicated designer was overloaded. Split time 80% engineering / 20% design while maintaining full sprint output.
- **Architected a dynamic form rendering system** for the CTA Tracking tool. A conditional React component hierarchy governed by a central state manager, enabling editorial users to manage complex, variable-field workflows without friction. Shipped to production, actively used.
- **Designed and built the UI to manage Real-Time Library.** Content automation platform integrating live sports data models with a multi-snippet templating engine, hierarchical content library, and multi-view editorial workflow (Scratch Pad, Previewer, QA, Archived Items). Architecture VP-approved; backend built; features deployed before team-wide layoff.
- **Worked directly with VP of Engineering** to test API endpoints in Postman and provide documented recommendations on backend endpoint architecture to identify where server-side rendering logic should move to improve client performance at scale across sports data of significant complexity.
- **Reduced UI-related issues by 25%** through maintainable component architecture and systematic debugging workflows. Partnered Product team to redesign frontend application addressing key user pain points identified through DataDog monitoring and user testing.

Freelance Software Engineer & UI Designer | [Independent](#) | 2021 – Present

- **ThreeSixtySessions:** Designed and developed full React website for a music producer — end-to-end from UX research and Figma prototyping through production deployment.
- **MindfulPose (in progress):** Designing and building a Vue.js PWA — sole owner of all UI architecture, interaction flows, and component patterns.
- **Client engagements:** User research, wireframing, interactive prototyping, responsive accessible implementation, and ongoing relationship management.

Museum Educator · Adjunct Professor | [Various Institutions](#) | 2012 – 2020

8 years developing and delivering structured visual and conceptual curricula across museum and university contexts. The ability to take technically or historically complex material and make it genuinely accessible to diverse audiences is not incidental to my engineering work, it is foundational to how I communicate with PMs, backend engineers, and non-technical stakeholders.

PROJECTS

Exhibition Engine — Baroque Chiaroscuro Study [Vue 3](#) · [Met Museum API](#) · [CSS](#) [Live](#)

How do you translate the physical weight of Old Masters into a digital environment? A curated virtual gallery pulling live data from The Met's open-access API. Custom Vue composable with multi-layer filtering validates metadata against Baroque date ranges (1580–1750) for academic rigor. Features include click-to-toggle zoom/pan built without any external library, interactive Light Study Mode simulating chiaroscuro effects in real time, and dark/light exhibition theme toggle.

[Curated Exhibition](#)

Visual Investigation Lab [Vue 3](#) · [OpenSeadragon](#) · [IIIF](#) · [Vite](#) [Live](#)

How can an interface guide users from fragmented perception to structured visual reasoning? Inspired by Visual Thinking Strategies (VTS), this environment uses a phased cognitive model — Investigation, Reveal, Reflection — to support sustained visual interpretation. Integrates OpenSeadragon for deep zoom, IIIF via the Art Institute of Chicago API, a loupe-style constrained viewing mode, and a click-to-annotate spatial reasoning system.

[Investigation Lab](#)

Van Gogh Pro — Posthumous Impact Dashboard [Vue 3](#) · [Node.js](#) · [Express](#) · [Chart.js](#) · [NLP](#) [Live](#)

How do you quantify the Posthumous Popularity Paradox? A fullstack analytical dashboard bridging 150 years of art-historical research with modern sentiment analysis. Node/Express backend runs an NLP engine processing historical critiques into quantitative Legacy Scores. ETL pipeline normalizes heterogeneous data — 1920s exhibition records through 2024 brand partnerships — into a unified schema. Decoupled service pattern keeps the frontend data-source agnostic for clean future API migration.

[VanGogh Analysis](#)

EDUCATION

Full Stack Web Development (MERN Stack) [Vanderbilt University](#)

Intensive full-stack program: MongoDB, Express, React, [Node.js](#). production-grade project work throughout.

MA, Art History, [Courtauld Institute of Art, University of London](#)

Ranked among the world's foremost graduate programs for art history. Rigorous training in structured visual analysis, primary-source research, and interpretive argument under conditions of ambiguity.

BA, Art History, [University of Texas at Arlington](#), Summa Cum Laude

ADDITIONAL TECHNOLOGIES & METHODS

Single Page Applications (SPA) · Progressive Web Apps (PWA) · Component Libraries · Design Tokens · State Management · Responsive Design · Web Accessibility (WCAG) · Cross-browser Compatibility · API Integration · Data Visualization · Agile / Scrum · Code Review · Technical Documentation · User Research · Wireframing · Prototyping · UX Design · Python (learning)

References and extended portfolio case studies available upon request.
